

Biopiran®

Antiparasitic blood in injectable solution.

REG. SAGARPA: Q- 2083-160

FORMULA

Each mL contains:	120 mg
Imidocarb Dipropionate	
Vehicle c.b.p.	1 mL

PRESENTATION

Bottle with 10 mL.

INDICATIONS

Biopiran® is indicated in the treatment and control of Babesiosis caused by equine and canine *Babesia* spp. Biopiran® can be used in situations where susceptible animals are found in Babesiosis incidence areas or in cases where infections are mixed or of unknown agent.

DOSAGE AND ROUTE OF ADMINISTRATION

CANINES:

Via intramuscular application or subcutaneous.

In case of Babesiosis, and Ehrlichiosis administer 0.5 mL per 20 kg of body weight, repeat therapy in two weeks.

EQUINES:

Via intramuscular application.

In case of babesiosis, administer 2 mL per 100 kg of body weight.

Used prophylactically, this dose will protect animals approximately 4 times weeks.

When the causal agent is *Theileria equi* (*B.equi*), it will be necessary to administer a second dose 24 hours after the first.

WARNINGS

Not exceed the recommended dose.

Not administered intravenously.

Store in a cool, dry place.

Keep out of reach of children.
